EDUCATION

SoyHenry Bootcamp — Full Stack Web Development (April 2023)

[View certificate](#)

FreeCodeCamp — Certifications

- [JavaScript Algorithms and Data Structures](#)
- [Responsive Web Design](#)

National University of Central Buenos Aires Province (UNICEN)

Public Accountant (Incomplete)

SKILLS

Programming Languages: TypeScript, JavaScript, Java, Rust, Python

Frontend: React, Next.js, Expo, React Native, Vite, Tailwind CSS

Backend: NestJS, Express.js, Spring Boot, Prisma, TypeORM, PostgreSQL, MySql

DevOps & Infrastructure: Git, GitHub Actions, Docker, Linux, AWS, Nginx, Vercel

Other: Bevy, Stellar Smart Contracts, SQL

PROFESSIONAL EXPERIENCE

Deacá — Full Stack Developer

September 2025 – August 2026 - A modern and interactive guide where you can find local products and services, as well as tourist information, events, and places to visit in the city of Olavarría.

- **Description:** Development and comprehensive implementation of an interactive web platform focused on centralizing local businesses, tourism, and events in Olavarría.
- **Technologies:** React, NestJS, PostgreSQL, Docker.
- **Integrations:** MercadoPago (Checkout/Payments), Google Maps Platform (Maps, Places, Geocoding), Google OAuth.
- **DevTools & AI Workflow:** OpenCode with persistent context/conversations in a dedicated database, autonomous agents, and custom skills.
- **Responsibilities and Achievements:**
- **Full-Stack & UX/UI Development:** I designed and implemented the user interface with React and built the backend service architecture in NestJS, ensuring a smooth and intuitive navigation flow. **API and Payment Integration:** I implemented advanced geolocation and seamless integration with MercadoPago to facilitate transactions within the platform.
- **AI Optimizations:** I configured advanced development workflows using OpenCode and dedicated databases to persist prompt context, streamlining the development cycle through agents and automated tools.
- **Infrastructure and Quality:** I deployed Docker containers to standardize environments, maintaining infrastructure and ensuring stability through automated testing and staging.

ForgeBytesLab—Freelance FullStack Developer (Founder)

December 2025 - Present - Designed, developed, and deployed end-to-end web and mobile applications using React, NestJS, PostgreSQL, and Docker. - Built and managed self-hosted infrastructure on a VPS, configuring Linux, SSH, Nginx, Caddy, and Docker-based CI/CD pipelines. - Implemented cybersecurity best practices including Fail2Ban, UFW, provider-level firewalls, and granular Linux user permissions. - Automated deployments and staging environments; later adopted Coolify to streamline operations without sacrificing infrastructure control. - Focused on secure, autonomous deployments and high-quality software delivery for clients. - Implemented local AI models as an AI developer to enable unlimited token usage and provide modern chatbot solutions trained with custom, domain-specific data for client applications.
